Category:Video game hacking and moddingThe present invention relates generally to the field of motor vehicle body assembly, and more particularly to a vehicle door structure for a motor vehicle. As shown in FIGS. 1a and 1b, a vehicle 10 includes a vehicle body component 12. The vehicle 10 has a windshield 14 that extends across an upper portion of the body component 12.

A door 16 is disposed in an opening in the body component 12, and is movable between an opened position and a closed position. A door trim 18 extends across an interior of the body component 12 and covers the opening in which the door 16 is disposed. Door hinge mechanisms 20 fix and/or position the door 16 in the opened or closed position. As shown, the door 16 is fixed in the opened position relative to the body component 12. As also shown, the hinge mechanism 20 includes a first hinge portion 22 and a second hinge portion 24. The first hinge portion 22 is fixed to the vehicle body 12, and the second hinge portion 24 is connected to the door 16. The first hinge portion 22 is configured to allow the door to open and close, and the second hinge portion 24 is configured to facilitate controlled movement of the door from the opened to the closed position. The second hinge portion 24 is connected to the door 16, and the second hinge portion 24 controls door positioning in both the opened and closed positions. A conventional door 16 is typically made from multiple materials, such as steel and plastic.

Although such a conventional door 16 can be manufactured in an efficient manner, such doors 16 are relatively expensive, which can add to the price of vehicle 10. Furthermore, conventional vehicle door structures are typically fixed in the closed position, which may result in noise and/or other problems when a door is fully closed.Q: Resampling a timeseries with monthly boundaries I have a dataset that is sampled daily and I would like to resample it to a monthly timeseries. I have the following

```
code: ts = pd.read_csv(exp.csv) ts.index = pd.to_datetime(ts.index.values.astype('str')) ts.set_index('year', inplace=True)
ts['month'] = ts.index.month ts.sort_index(inplace=True) ts.drop('year', axis=1, inplace=True) ts = ts[pd.to_dat 1cb139a0ed
```
