AutoCAD is part of the product group "AutoCAD (R)" for AutoCAD for AutoCAD (R) for AutoCAD Architecture, the latest release of the AutoCAD product line. There are also AutoCAD Architectural Studio, AutoCAD Electrical, AutoCAD Inventor, Autodesk Technology Network, and Autodesk 360 Cloud for AutoCAD. According to Adobe, AutoCAD has the most features of any CAD program, with more than 6,000 commands, macros, functions, and tools available. These features are partly implemented in the product's programming language, ObjectARX. History Autodesk started as a research and development company in 1968. The company started with Computer Aided Drafting or CAD, building computer tools for drafting and design. Autodesk's first product was LISPISP, a language for AutoLISP, an extension to LISP, a programming language that was developed for DEC PDP-11 minicomputers and the Digital Equipment Corporation (DEC) PDP-7. It became Autodesk's main program language when AutoCAD came out in 1982. AutoLISP was eventually replaced with ObjectARX, and then Visual LISP when Visual LISP was rewritten. CAD programs History ObjectARX Called "the heart of AutoCAD", the ObjectARX API is a C++ class library used to implement the majority of the commands in AutoCAD. It was created in 1982 to replace AutoLISP. It is object-oriented, and includes functions similar to those of LISP and Visual LISP. ObjectARX supports inheritance, and has a large collection of classes. It is also used to generate the native code for AutoCAD. AutoCAD Architecture AutoCAD Architecture is a third-party add-on application for AutoCAD. It was started by Axility, the company that developed AutoCAD's ObjectARX API. The software provides an API (application programming interface) for AutoCAD that extends the functionality of AutoCAD using plugins.
