client and server example in C

Is there any example in the Internet about the UDP/IP client and server? I am trying to write UDP/IP server and client with C language, but I have no idea how to do this. Is there any tutorial or documentation for UDP/IP in C? A: Here is a tutorial on network programming using

UDP/IP: Q: As a moderator, is it appropriate to delete my own question that was posted with good intent? I've noticed a recent comment on a question I asked about a specific rule in the new rules on the main meta: How do we deal with people who ask questions that they can't take themselves? I just don't want

to have people here who can't use our site, because they are too lazy or do not care about the rules. This has been discussed in the comments, and people have been asking whether I should delete the question. The site was originally posted before the new rules went into effect, and I think the question was

good. It's now been edited to include the question that now generates the closing message: "This question exists because it has historical significance, but it is not considered a good, on-topic question for this site..." What should I do?

listview. in android I am adding an object to the listview and another object for the same position in the listview. But the problem is the new object (let's say I added TextView for the item) always shows up at the last item added. I want it to be shown at the item added. Here's my code:

```
@Override public void  
onCreate(Bundle  
savedInstanceState) { super.o  
nCreate(savedInstanceState);  
setContentView(R.layout.mai  
n); setListAdapter(new  
ArrayAdapter(this, android.R.  
layout.simple_list_item_1,  
movies)); // clicking on the  
item adds it to the list view  
ListView lv = getListView(); 1
```

```
v.setOnItemClickListener(new OnItemClickListener() {  
    @Override public void  
    onItemClick(AdapterView  
parent, View view, int  
position, long id) {
```
