Yoshikoder is a user-friendly application built to analyze text content. It gives you the possibility to collect multiple text files and access them from one place. Furthermore, the tool can create dictionaries, compile reports with the word frequency, highlight entries, change the font face, and pick various encoding modes when it comes to ASCII, Unicode or national encodings. Analyze text content and view reports Make sure that Java Runtime Environment is installed on your computer or the utility won't work properly. It doesn't have to be installed so you can just double-click the file to gain access to the main window. Thanks to its small size, you can store the app on a thumb drive and effortlessly run it on any PC with Java. New projects can be put together by specifying a name and description. It's also possible to copy documents. Next, you can populate the initially empty workspace by adding categories, patterns and text documents. Create projects with categories, dictionary entries, and patterns The opened documents can be easily accessed from a tree view on the right, while the dictionary, categories and patterns are available on the left. The center part is reserved for the file content. Although it's possible to select text for highlighting purposes, there are no editing features since Yoshikoder acts solely as a text reader and analyzer. On the bright side, you can export documents in UTF-8 or UTF-16 format, highlight entries with any preferred color, set the highlight color in HSV, HSL, RGB or CMYK mode, as well as create and apply content analysis dictionaries, make concordance and export it in HTML or Excel format. A table can be viewed to find out the number of occurrences for each word in the current or all documents. Simple content analyzer with custom dictionary and word counter All aspects considered, Yoshikoder provides users with a comfortable workspace and simple tools for analyzing text. It features a dictionary function and word counter. My first impression of this tool was that it's extremely well done. I was able to work with multiple languages and it can analyze text in a very timely manner. I was able to accomplish what I needed. It's a great tool for any user. I would recommend it to anyone who works with a wide variety of text. It's a great tool. It can't do everything, but it can do a lot. For example, it can report the number of sentences, the number of words, the number of lines
