This article provides an overview of Photoshop as a graphic design tool. A Photoshop tutorial is included for learning how to use Photoshop's various features. The tutorial is designed so that no prior Photoshop experience is required and the information is adaptable to an introductory level. Part 1: Getting Started Before you start Photoshop, it helps to have a general idea of what you want to achieve. This is especially true when you are learning a new application. This part will help you answer the question, "What do I want to do?" and set the stage for choosing the best tools for the task. 1. Get familiar with Photoshop's interface The most important aspect of Photoshop is the software's user interface. By default, Photoshop opens with the "Windows" layout, where each new document opens next to the last. This works well for many desktop computers, but may be confusing for some people. (See the next section on editing tips for how to overcome this problem.) If you prefer a different layout, you can set Photoshop to "Maximized" mode, which opens everything in a single window. If you prefer, you can create additional windows of your own. 2. Decide whether you want to edit images in layers or pixels When you start an image in Photoshop, by default it is loaded as a blank document and all the changes you make are applied to the pixels in the document. Photoshop is, however, designed to be much more than a simple image editor: It is a layer-based editing tool that is much more capable of producing sophisticated images. This also means that you can combine multiple image layers to perform complex editing tasks. It is also possible to apply styles or effects to any given layer, and then to use those layers in other layers or on other images. It can take a while to get used to working with layers. This is worth learning, but if you are working on a regularly project, you are probably not going to want to learn the layer-based workflow until you become more experienced. The challenge of working with layers is that you must always update all of the layers to bring each image into synchronization with the others. This can get very cumbersome and is a poor workflow, especially if you are working with images that don't require a layer-based approach. However, those who are more experienced with Photoshop may find the benefits of layers make them an important part of their work. 3. Begin with a digital background

So for example, if I'm wanting to cover an event which currently isn't scheduled by ANYONE, the error message doesn't appear. I think this is a problem with how the schedule updates from russincare, as some events are only sporadically reported, but they simply aren't being handled. I think the solution is to just have the timetable auto-update when this happens and then handle the fact that a few schedules were just set for no reason. I know this isn't a perfect solution
