I did a lot of searching and I can't figure it out. I understand in.js that var is different from non-global var test2 = 'testing stuff from the body'; // this is calling the variable in this context console.log(test2); //

but this is a global variable console.log(test1); In my js file I am using two very loose lint style rules like this: /*jslint laxbreak: true, sloppy: true */ if (!this.hScre) { this.hScre = window.document.createElement("canvas") } which I got from a github issue about cross-browser canvas stuff. My questions are: Why is it different? I realize my stylesheets are completely busted. Is there some kind of pattern by which my javascript files get loaded and the.js file contains the variable defined there? Is it that the entire document is just all at once pulled into memory and executed at once before all these.js files are linked in? With that said, if anyone can explain to me why the var keyword works one way in 1.

There are many websites that sell the game with cracks. You do not have to worry about buying the game when you are short. It can be downloaded through the link below. _____ There is a point in the game where you have the choice of killing the hero, where she is obviously doing what is best for the people of the land to protect against the other two sides who are at war. But this isn't explained well in the game. Most of the time, the hero will just trigger an event that gets rid of all other heroes and you are left out to dry. Then, the game kicks you out and forces you to start all over again. Sooooooo yeah, buy this game a little prematurely and you're gonna have a sad time of it. Maybe you'll learn a lesson or two...or three...or four...or five...or six...but it's gonna cost ya' a quarter's worth of hours... -sighs- You're going to have to find an old-school game. Like 2D action rpgs from the '90s. Like MechWarrior 3. Like how the story is told. Like how you're even going to be able to play it after you complete all of the tutorials. Like...THE VISUAL DEPTH IS UNBELIEVABLE. The atmosphere is unparalleled. Every cast of characters with their own back stories, colorful color palettes, animated cutscenes, and story twists. -sighs- That, my friend, is some AAA gaming goodness. In short, you can play this game in its two most played modes, single player and online multiplayer. The single player aspect allows you to forge your own path through the Lands Between, and you can create your own characters (including the two additional heroes that can be recruited). Online multiplayer is made up of three modes: play alone, play with friends, and play with random people. You have a team of 2-4 characters, and you control your team via your console buttons. Players can choose a class of their choice from a selection of nine classes and assign them into three main roles. A character's class determines their effects in the game. For example, a Warrior's primary class grants them the energy shield, while the Mage's gives them the elemental attack. Unlike most fantasy RPGs, where defeating your enemy
